Water Hygiene Technician (Plumber)

Location	Taunton and Birmingham – field-based
Employment	Full-time | 37.5 hours per week | Monday–Friday
Salary and benefits	Competitive salary, bonus, overtime opportunities and company van

The opportunity

Are you a plumber looking for a different challenge? Join Dantek as a Water Hygiene Technician and use your practical skills to help keep water systems safe and reduce the risk of Legionnaires' disease. You do not need previous water hygiene experience: we provide structured specialist training and mentoring.

Purpose of the role

Visit customer sites to carry out planned water hygiene services, inspections and minor remedial plumbing work. Deliver work safely and professionally, maintain accurate records and provide a positive customer experience. The role combines independent field work with support from an experienced team.

Key responsibilities

- Monitor and record water temperatures at customer premises.
- Carry out minor plumbing remedial works and service thermostatic mixing valves (TMVs).
- Clean and disinfect cold water storage tanks and showerheads.
- Inspect water storage tanks and calorifiers and collect water samples.
- Complete job sheets, site records and reports accurately and on time.
- Use and look after tools, personal protective equipment and other work equipment.
- Maintain a professional appearance and keep the company van and equipment organised.
- Travel between customer sites, working safely and communicating professionally with customers and colleagues.

About you

- Practical plumbing experience or a plumbing qualification.
- A positive attitude and willingness to learn specialist water hygiene skills.
- Confidence to solve problems and make sensible decisions while working on site.
- Good communication, organisation and attention to detail, including written reporting.
- Flexibility to travel regularly and occasionally stay overnight.

- Desirable, but not essential: experience of TMV servicing, calorifier inspections, BS8558 disinfection or water softener servicing. Full specialist training is provided.

Working arrangements

This is a mobile role involving travel to customer sites (approximately 2,000 miles per month) and occasional overnight stays. Standard working hours are 37.5 per week, Monday to Friday, with overtime opportunities.

What Dantek offers

- Competitive salary with progression opportunities.
- Bonus scheme and overtime opportunities.
- Company van.
- An 11-module training programme with hands-on mentoring.
- 28 days' annual leave including bank holidays, increasing with service.
- A supportive, owner-managed family business with a focus on teamwork, results and work-life balance.

About Dantek

Dantek Environmental Services is an established, owner-managed family business specialising in water hygiene and legionella control. We value everyone's contribution, encourage solution-focused thinking and invest in developing our people.

How to apply

Apply through our Indeed vacancy. Applicants will be invited to complete a short application form and assessment; the selection process includes an initial video interview and a final face-to-face interview at our office.
